## PERSONAL STATEMENT

I am a front end developer from Winchester, Virginia. I come from a design background and have a passion for great design and I love building user interfaces. My specialty lies in creating UX focused and shiny UIs.

I create and style user interfaces for web and mobile applications. I've worked with several front end frameworks including React, Angular, Ionic, and Ext JS.

On a typical night you can find me advancing my education in JavaScript, game programming, or playing Dungeons and Dragons.

## WORK EXPERIENCE

### 2016 - Present, Front End Developer

I am currently working as a contractor for **Fiat Insight** where I am building a custom scheduling application in React JS, implemented inside a WordPress theme and utilizing the new WP API.

### 2014 - 2016, UI Engineer

At **Modus Create** I worked (mostly) remotely as a user interface engineer in a lean and agile environment. I built user interfaces, templates, and components for applications in Angular JS, Ionic, and Ext JS. I collaborated with UX designers, clients, project managers, and other engineers. I am comfortable working in a fast-paced environment with daily standups, Jira/Pivotal Tracker workflows and tickets, and constant communication via Slack or video chat.

### 2012 - 2014, UI Designer

I was a user interface designer at **Timberlake Membership Software** where I did responsive web design. I built responsive websites using HTML, CSS, and Bootstrap which were integrated with a custom ASP content management system.
